

Christian Martin

Senior Cloud Infrastructure and Cybersecurity Architect

Zurich, Switzerland | +41 76 266 5579 | contact@cmartin.io | cmartin.io | linkedin.com/in/christian-martin-ab02a444

Nationality: American (USA) | Swiss Work Permit: B Permit | English C2 (Native) | French C2 (Native) | German B1

PROFESSIONAL SUMMARY

Senior enterprise technology leader with over 15 years of experience designing, securing, and scaling cloud and hybrid infrastructure for organizations ranging from US federal agencies to global financial institutions. Deep technical fluency across AWS, Azure, and GCP is matched by hands-on expertise in cybersecurity operations, infrastructure automation, and DevSecOps transformation. Carries an elite certification portfolio including CISSP, AWS Solutions Architect Professional, AWS DevOps Engineer Professional, and Azure Solutions Architect Expert. Proven track record across classified government engagements, large-scale public sector cloud migrations, and high-value M&A advisory in financial services. Fluent in English and French with working German. Based in Zurich and available internationally.

CORE COMPETENCIES

Cloud and DevOps:	AWS (SAP, DOP), Azure, GCP, Kubernetes, Docker, Terraform, Ansible, Jenkins, CI/CD Pipelines, GitOps, Cloudflare
Cybersecurity:	CISSP, Zero Trust Architecture, Penetration Testing (Grey/Black Box), Threat Hunting, DFIR, Splunk SIEM, PCI-DSS, NIST, ISO 27001, CIS Benchmarks
Infrastructure:	VMware vSphere, ESXi, RedHat Enterprise Linux, Windows Server, SharePoint, ELK Stack, Prometheus, Nginx, HAProxy
Programming/Automation:	Python, Bash, PowerShell, Java (Spring), PHP, JavaScript, AWS CloudFormation, YAML
Architecture:	Enterprise Cloud Architecture, Migration Strategy, SRE Principles, High Availability Design, Disaster Recovery, Multi-Account Governance
Security Tools:	Kali Linux, Wireshark, Burp Suite, Metasploit, Nmap, AWS Route 53, CloudFront, Hadoop, EBS, Lambda, Splunk

PROFESSIONAL EXPERIENCE

Senior Cloud and Security Consultant

Nov 2022 – Present

Independent Contractor | Zurich, Switzerland

- Built and operationalized production-grade, self-healing cloud environments for 6 SMB clients across Switzerland and the United States, using Terraform and Ansible to fully automate provisioning on AWS and Azure, achieving 99.9%+ service availability with zero manual deployment intervention.
- Designed resilient DNS and content delivery architectures using AWS Route 53 and Cloudflare, consolidating CDN performance, DDoS mitigation, and security policy enforcement into a single managed operational layer.
- Constructed modular, version-controlled WordPress deployment pipelines with automated SSL lifecycle management, WAF configuration, and environment cloning capabilities, giving clients the ability to reproduce identical production environments on demand.

Solutions Architect and Project Manager

Nov 2020 – Oct 2022

Riverside Church Organization | New York City, NY

- Led a ground-up AWS cloud migration for a content platform receiving over 1,500 weekly visitors, re-architecting the delivery layer with Nginx reverse proxy and tiered caching to produce a 20% throughput improvement measured post-cutover.
- Completed a 300-seat AWS Workspaces rollout at pandemic peak, converting the organization's full desktop estate to cloud-hosted virtual desktops and maintaining uninterrupted operations throughout the transition period.
- Developed a suite of automated operational workflows combining Python, Terraform, Ansible, and AWS-native tooling to govern EBS encryption compliance, AMI lifecycle scheduling, and Lambda function management, recovering an estimated 2 to 3 weeks of engineering effort per operational cycle.

VMware Infrastructure and Systems Security Engineer

Nov 2018 – Oct 2020

Riverside Church Organization | New York City, NY

- Re-engineered a mission-critical SharePoint 2016 platform on VMware vSphere, authoring custom ESXi images through PowerCLI to standardize the deployment footprint and eliminate configuration drift across all nodes.
- Built a unified infrastructure automation framework using Terraform, Ansible, Python, and Bash to manage the full provisioning and configuration lifecycle for VMware, Linux, and Windows Server workloads, replacing ad hoc manual processes with repeatable, auditable pipelines.
- Delivered LEMP and LAMP stack environments supporting all web-facing operations, tuning each configuration against defined service level objectives and sustaining consistent production stability at scale.

Associate DevOps Engineer

Nov 2016 – Oct 2018

Amazon Web Services (AWS) | New York, NY

- Partnered with major enterprise clients including the State of Maryland and a classified federal account to design and implement CI/CD platforms on AWS CodePipeline, CodeCommit, ECS, and EKS, accelerating software delivery cycles and improving cloud resource utilization.
- Developed and enforced multi-account cloud governance models that standardized security controls, cost allocation, and access management across complex enterprise environments operating in regulated industries.
- Embedded automated security and compliance gates into client CI/CD pipelines by integrating cfn-lint, cfn_nag, and Cloud Custodian through Python and YAML, reducing policy violations at the point of code deployment.
- Managed full project lifecycle delivery for telecom and public-sector clients using AWS Global Infrastructure, coordinating cross-functional workstreams to consistently meet delivery milestones and cost targets.

Infrastructure Analyst, Computer Network Defense (CND)

Apr 2013 – Dec 2015

iDefense Inc. (Contractor) | Chantilly, Virginia

- Performed classified advanced penetration assessments using Grey and Black Box methodologies against Azure cloud and hybrid infrastructure on behalf of government and critical infrastructure clients; all operational details remain confidential under executed contractor NDA.
- Designed and deployed Splunk SIEM dashboards that correlated log streams across enterprise networks, equipping the Threat Hunt team with real-time forensic visibility and enabling proactive identification of adversarial activity.
- Implemented and validated security control frameworks aligned to PCI-DSS, SWIFT, NIST, and ISO standards, conducting systematic OS hardening per CIS Benchmark specifications across all production environments.

Data Engineer

Mar 2011 – Feb 2013

Gwynnie Bee | New York City, NY

- Developed a production barcode processing system integrating the Honeywell Voyager MS9540 scanner via javax.comm, automating serial input capture and database write operations to process over 6 million physical garment records.
- Stood up a MySQL instance on RedHat Enterprise Linux and designed a bidirectional synchronization pipeline between NetSuite and MySQL, staging data to Hadoop for downstream analytics processing at operational scale.

Credit Risk Analyst (Contractor)

Feb 2010 – Dec 2012

Cerberus Capital Management LP | New York City, NY

- Contributed analytical and research support across three buy-side M&A transactions totaling over \$22 billion, spanning Cerberus's \$17 billion Supervalu acquisition, the Steward Health Care System deal, and a \$5 billion TransCentra transaction.
- Built valuation models using DCF analysis, public company comparables, and precedent transaction frameworks that identified material undervaluation in acquisition targets, directly informing negotiation positioning and deal terms.
- Produced a five-year financial projection for the Supervalu transaction, incorporating scenario analysis across key operational metrics for presentation to creditors, lenders, and capital partners.
- Supervised a three-analyst team through equity valuation and due diligence on TransCentra, building a pro forma financial model that served as the primary analytical basis for the \$5 billion acquisition decision.

EDUCATION

BSc in Computer Engineering

University of Cape Town (UCT) | Cape Town, South Africa

Graduate-Level Coursework in Computer Science

City College of New York (CUNY), Grove School of Engineering | New York, NY

CERTIFICATIONS

- Certified Information Systems Security Professional (CISSP)
- AWS Certified DevOps Engineer, Professional
- CompTIA Security+
- SANS SEC505: Securing Windows and PowerShell Automation
- AWS Certified Solutions Architect, Professional
- Microsoft Azure Solutions Architect Expert
- CompTIA CySA+

PROFESSIONAL DEVELOPMENT AND TRAINING

- **SANS Cyber Threat Intelligence Summit** (Jan to May 2023): Advanced CTI collection, analysis, and distribution using Splunk and SolarWinds across enterprise environments.
- **SANS Cloud Security Exchange** (Feb to Apr 2023): Enterprise cloud security architecture, threat modeling, and defense strategies for hybrid environments.
- **SANS NetWars Tournament of Champions** (Nov 2021): Competed in this prestigious annual ethical hacking competition focused on advanced offensive security techniques.
- **SANS DFIR Summit and Training** (2021): Network forensics, packet capture analysis, and incident response using tcpdump and Wireshark.
- **SRE and DevOps Engineer with Google Cloud**: Completed a 5-course Google Cloud Professional Certificate covering delivery pipelines, service deployment, monitoring, and SRE principles.
- **Data Engineering, Big Data and Machine Learning on GCP**: Completed a 5-course accelerated GCP specialization in big data architecture, analysis, and optimization (Coursera, 2019).
- **Google Cloud Data Engineering Research Program** (2016 to 2017): Competitively selected as 1 of 87 participants for a 24-week intensive program covering GKE, Kubernetes, Docker, and advanced Python and Java development.
